

**A prospective, observational cohort study of the Master SL Femoral Stem in patients with degenerative disease of the hip.**

Follow up phase – 2 year data achieved September 2017

Level IV: Prospective Case Series

The aim of this study is to assess the clinical performance of the MASTER-SL femoral stem under standard condition of use in Total Hip Arthroplasty, and compile data for the source company LIMA. The results of this study along with existing short-term data collected in the UK will be used by LIMA to apply for TGA listing for the aforementioned prosthesis.
