

**Optimizing post-operative outcomes in Total Knee Arthroplasty (TKA) through improved pain and fatigue management: A randomized placebo controlled trial.**

Level II: RCT, Interventional

The aim of this study is to determine whether adjuncts to pain management which improve sleep and fatigue also improve patient satisfaction and functional outcomes post TKR. This study is a multi-centred prospective, blinded, randomized, placebo controlled trial. There are four treatment arms; placebo, Temazepam, Amitriptyline, and Pregabalin.
